

NUCLEUS SOFTWARE'S ENTERPRISE APPLICATION SERVICES

NUCLEUS
SOFTWARE

Unlocking Business Value with Enterprise Applications

For Banking and Financial service organizations, it is crucial that the applications which support the mission critical processes function smoothly, round the clock. This can be best achieved when the applications are maintained and supported by experts who have a thorough understanding of the environment.

Nucleus Software's application service portfolio is targeted at enhancing the overall reliability, accessibility, performance and effectiveness of the applications. Nucleus Software offers scalable, end-to-end application development and management solutions spanning across requirement analysis, deployment and rollout. We collaborate with customers to understand the expectations, technology roadmap, processes, and the environment. We also contribute by way of the best practices that we have earned with decades of experience and deliver ace solutions that keep our customers ahead of the curve. Nucleus Software is committed to assist customers in "Run the Business", "Change the Business" and "Shape the Business" initiatives.

ENTERPRISE APPLICATION SERVICES

Organizations striving for operational excellence need to maintain a streamlined, stable and robust application portfolio. Rationalizing the application portfolio periodically ensures that the legacy applications are updated, retired or consolidated, freeing up resources which can be invested on innovation. Nucleus Software, through its Enterprise Application Services (EAS), offers a highly experienced team of technology experts, ready to resolve the complexities of your application portfolio to help you accelerate operational excellence

Application Development

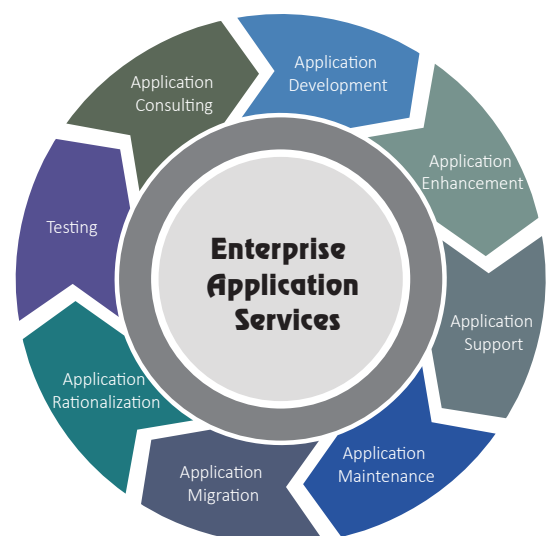

In order to stay ahead of the competition, organizations and their IT partners need to quickly adopt the evolving trends in business & technology and create winning propositions. Nucleus Software provides its assistance at each stage of SDLC spanning across business scenario, requirement analysis, concept creation, development, deployment and launch of both standard as well as customized solutions.

Application Maintenance

Nucleus Software's application maintenance service (AMS) processes are designed with a holistic view of technology, information architecture, people and services. We begin with corrective maintenance; evolve to adaptive, preventive and perfective maintenance. Our decades of experience in BFSI domain ensures that these maintenance services enhance application stability, lower support costs, reduce total-cost-of-ownership (TCO), and steer continuous service quality improvements.

Application Support

The ever increasing number of technology platforms has made in-house management of applications a challenge resulting in high TCO and hampering informed investments in IT enhancements. It is essential to have a reliable support partner for shouldering the burden of managing complex scenarios and troubleshooting typical problems. We offer customized and differentiated solutions including multiple level of support in line with customer's priorities and business objectives.

Application Integration/Migration/Transformation

Today's dynamic business scenario and escalating customer demands warrant that the organizations must have the agility and ability to respond quickly to change. This would require an enterprise IT architecture that is not constrained by legacy applications and facilitates smooth information flow across departments and multiple geo locations. Our application integration and migration practice provides a structured information processing and delivery framework that has helped leading global organizations break down information barriers across the enterprise. We deliver end-to-end solutions addressing the four critical elements of operations – Business, People, Process and Technology.

Application Testing

The testing function in today's progressive organizations has become rather complex and challenging in light of shorter development cycles, rapidly evolving methodologies and increasing number of platforms coupled with the demand for latest updates. Nucleus Software has an established testing methodology and employs a wide range of industry-standard testing tools to provide organizations with superior software quality, enhanced business readiness and real competitive advantage. Leading businesses worldwide trust Nucleus Software's expertise to enhance the testing efficiency and precision, reduce costs and decrease cycle time. Expertise on both the business and technical sides of testing has helped create innovative approaches that deliver accelerated results.

Application Consulting

Deep understanding of BFSI domain and platforms, well-defined frameworks and methodologies, Centre of Excellence and certified software developers enable Nucleus Software to address the specific business challenges of customers. Nucleus's Application Consulting services help customers in defining and analyzing the feasibility of the solutions and processes, assessing product security, performance and scalability.

BUSINESS VERTICALS

- Corporate Banking
- Private Banking
- Retail Banking
- Insurance
- Non Banking Financial Corporations

ENGAGEMENT APPROACH

- Full life-cycle application development- We assume end-to-end responsibility for analysis, design, implementation, testing and integration of systems
